Nystrom is proud to present an AIA HSW CE course educating design professionals on photoluminescent lighting systems

Course Description

This course examines the need for photoluminescent lighting systems in commercial buildings to provide safe exit pathways during emergencies – and to do so consistently without electricity. We will discuss the evolution of photoluminescent egress lighting, current code and testing methods that mandate photoluminescent system implementation. We will review luminescent products types and benefits of using to better protect building occupants.

Learning Objectives

1. Explain the importance of pathway illumination to the life safety of the building occupants and how it aids in making a safe and fast egress out buildings during emergencies
2. Detail why a safe system is necessary
3. Identify when and where these requirements are needed in building products, based on the 2012/2015/2018 IBC and IFC
4. Discuss UL 1994 and ASTM E 2072 test standards and explain how luminous egress markings must comply to meet the current building codes
5. Create a strategically laid out plain with product options
